Dola AI Critique Document

Dola AI is a smart assistant to your daily life. It can be integrated with any messaging app helping you to schedule things based on the text and audio inputs. There is no need to scroll through Google and various news apps, you can have the top news and updates readily summarised for you on your messaging app.

Dola is a clever sidekick to your daily life. It does make your life easier. It saves you the effort of keeping manual reminders, Googling about stuff, and marking your physical calendars for an upcoming event.

***Understanding various flows of Dola AI*:**

- **Setting a reminder based on a Text Input** -
    1. Open your messaging app, let's say 'WhatsApp'.
    2. Open your chat with Dola AI.
    3. Type 'Set a reminder for 2:00 pm today to remind me to take my medicines.' (Refer to Fig.1 below)
    4. A reminder is added.
    5. You can modify it, or delete it.

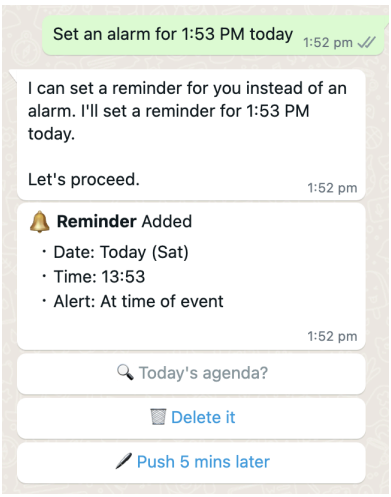

Fig 1

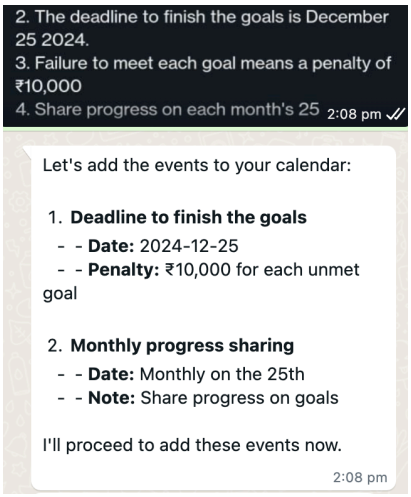

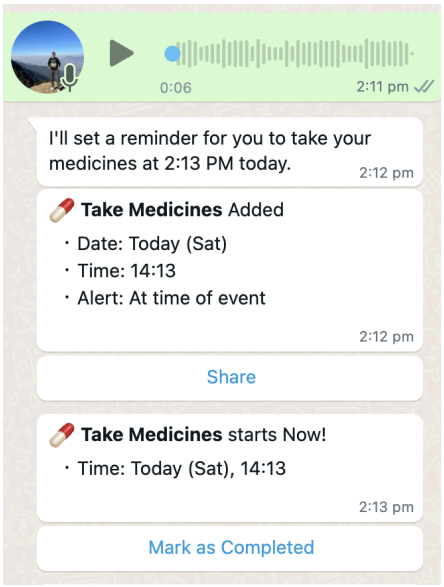

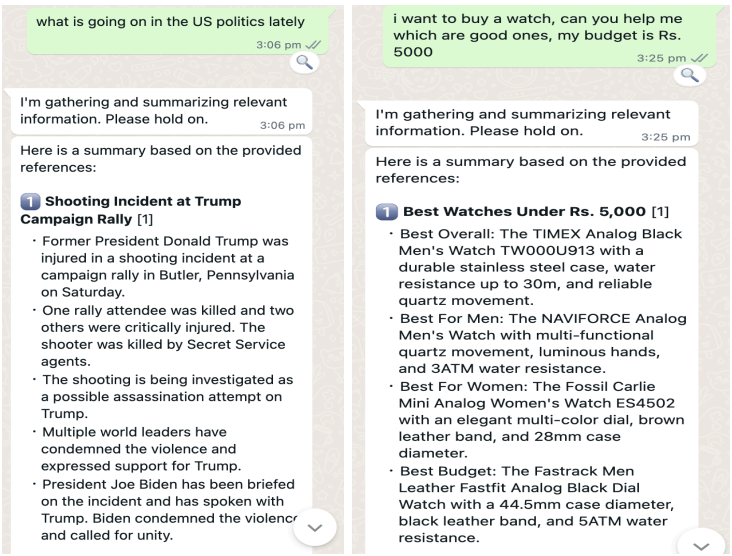

Fig2

- Setting a reminder based on an Image -
    1. Open your messaging app, let's say 'WhatsApp'.
    2. Open your chat with Dola AI.
    3. Upload an image which could be an event flyer, brochure, or your manually written points. (Refer to Fig.2 above)
    4. Events are added to the calendar automatically.
    5. Prompt sent to sync Google Calendar and Dola AI calendar

- Setting a reminder based on a Voice Input -
    1. Open your messaging app, let's say 'WhatsApp'.
    2. Open your chat with Dola AI.
    3. Start recording an audio message for which you want to set the reminder.
    4. The event was added to the calendar.
    5. Can reset the reminder if you didn't complete the event/task.

- Getting the latest news updates or searching about anything -
    1. Open your messaging app, let's say 'WhatsApp'.
    2. Open your chat with Dola AI.
    3. Give a prompt for the news you want or search for about anything as per the screenshot below.
    4. The assistant prepares a summary of events with references to it.

Evaluating the above flows:

The above solutions solve several problems, including the following:

1. Traditional calendar apps often involve a large number of steps to do a small operation; the multifold input options(text, image, audio) allow users the convenience to accept the chaos in their lives and still plan things out.
2. Posters, screenshots, invitations, etc. are old and inefficient ways to plan out things; extracting relevant information from them and organizing them in a sophisticated manner makes the whole process error-free and convenient.
3. You can always check the weather when the event is scheduled; just to know if you have to carry an umbrella or sunscreen.
4. People are normally overwhelmed by the amount of information available to them; a lot of time is invested into finding out the quality and quantity of information from the internet. Dola AI provides quick and short information without needing to search for terabytes of information.
5. Everything's just a message away.

User Segments:

Listing down all the user segments for whom the above solution makes the most sense:

1. **Small Business Owners in India**: Millions of business owners in India operate in an unorganized fashion on WhatsApp and other messaging apps. They don't have the technical expertise to opt for sophisticated solutions; these efficient solutions are a life saver for them as they can help them to organize their daily schedule, and meetings, and get relevant business-related information.
2. **Family Groups and Homemakers**: A better way to plan out family gatherings, take care of their children and their schedules, remind them of their assignments, study sessions, etc.
3. **Travel Enthusiasts**: Easy scheduling of various travel plans taking into account the weather information and news around particular areas.
4. **Working Professionals**: Allowing busy working professionals to manage their daily home activities like grocery reminders, and bill payments, along with planning out activities with their friends and families.

This is an excellent solution to bring order to the chaotic world of common people who think they don't need this solution but they sure will enjoy and get used to it once tried out :)

Revenue Opportunities:

1. **Cross-Selling**: Recommending goods to users as per their interaction with the DolaAI chat assistant. Ex: ‘Remind me to plan out my next Europe Trip in December with my family’; we can suggest plans from Tripadvisor, MakeMyTrip, SOTC, etc. to users. Maybe even suggest relevant flights and affordable options.
2. **Integration with Marketplace services**: Provide integration with online marketplaces like Amazon, Flipkart, Zepto, and Swiggy to get users ready for their events. Ex: ‘Remind me to shop for my sister’s wedding gift.’ Suggest some relevant gift searches from these marketplaces to make ordering a ‘click-away activity’.
3. **Enterprise Solutions**: Provide the DolaAI model to various small businesses or large enterprises to integrate these features for their employees’ day-to-day work.
4. **Recommendation Tool**: Provide recommendations to users based on their reminders and charge commission based on the conversion rate.
